Company

Founded in February, 1996.

Business concept

Ecolean develops and manufactures packaging systems for the dairy and liquid food industry – packaging material, packaging, and filling machines. By using a minimal amount of raw material we create a lightweight package which combines low environmental impact with consumer convenience. Ecolean is an international company with its headquarters in Sweden. Founded in 1996 Ecolean has commercial activities in 30 countries, China and Russia being the largest markets.

Product and production concept

The Ecolean® packages are made from the Ecolean Calymer™ material, which is a thin film of plastic (PE and PP) and chalk (40 % by weight), one of nature's own material. The unique properties of Calymer allow a lightweight package that takes less energy to produce. The Ecolean lightweight concept provides a package material that is flexible and tough, perfect for various packaging solutions, but also a material with exceptional environmental properties. The Ecolean packaging material and packages are manufactured and printed in Ecolean factories. The hygienic, hermetically pre-sealed packages are delivered on reels to the producer's factory.

The Ecolean concept also includes a ready-to-use production line in the form of equally unique filling machines and packing stations. In the filling machine, the pre-sealed packages are opened, filled and re-sealed in 2.4 seconds.

Staff

260 employees – 160 of these in Sweden.

ecolean

Markets

Ecolean is an international company focusing on customers in the European, Russian, Chinese and Pacific markets. In many countries, Ecolean is already a popular choice for fresh milk, yoghurt, cream, kefir and other fermented products.
